DETAILED ACTION

This Office action is response to the applicant's paper number 5 filed on 3/4/03.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-7, 11-18 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Hegemier (US 6,003,276).

Hegemier discloses reinforcement of cementitious walls to resist seismic forces comprising one or more anchoring devices 40, each anchoring device 40 is rigid, right angle or L-shaped plate and having a first portion 42, a second portion 44, the first portion 42 of each anchoring device fixedly attached to the structural member 20 such as a wall, and the second portion 44 of each anchoring device 40 is fixedly attached to the base member 22 such as a foundation or a roof (col. 4, line 23) by bonding mechanism (high-mod epoxy), wherein each anchoring device 40 comprises a fiber composite material 52 (col. 6, lines 35-40). The wall 20 is having one reinforced sidewall 34 (col. 7, line 32).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 3635

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 8-10 and 19-21 are rejected under 35 U.S.C. 103(a) as being

unpatentable over Hegemier (US 6,003,276) in view of Adams (US 4,903,450).

Hegemier discloses reinforcement of cementitious walls to resist seismic forces comprising one or more anchoring devices 40, each anchoring device 40 is rigid, right angle or L-shaped plate and having a first portion 42, a second portion 44, the first portion 42 of each anchoring device fixedly attached to the structural member 20 such as a wall, and the second portion 44 of each anchoring device 40 is fixedly attached to the base member 22 such as a foundation or a roof (col. 4, line 23) by bonding mechanism (high-mod epoxy), wherein each anchoring device 40 comprises a fiber composite material 52 (col. 6, lines 35-40). The wall 20 is having one reinforced sidewall 34 (col. 7, line 32).

Hegemier does not disclose expressly the base/footing member further comprises an internal wall defining a groove, and the second portion of each anchoring device is at least partially disposed within the groove, an elongated member disposed within the groove.

Adams teaches concrete footer block and foundation system comprising a base for footer blocks 10 having internal groove 18a, 18b, an anchoring device 30 is partially disposed within the groove along with reinforcement rods or elongated members 24 disposed within the groove. (See figs. 4-5). At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Hegemier with Adams

Art Unit: 3635

for footing block having internal groove and elongated members disposed with the groove. The motivation for doing so would have been to provide a stronger foundation and able to keep up-stand the wall.

5. Claims 23-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hegemier (US 6,003,276) in view of Adams (US 4,903,450).

Hegemier and Adams disclose the structural elements for the anchoring device as stated except for the method of construction for anchoring a structural member of a building, examiner considers this to be the obvious method of setting up the device of claims.

Response to Arguments

6. Applicant's arguments with respect to claims 1-31 have been considered but are moot in view of the new ground(s) of rejection.
